

**Stars, Galaxies, and the Universe** ▪ *Connecting Concepts*

# Connecting Concepts

Develop a concept map that uses the key concepts and key terms from this chapter. Keep in mind the big idea of this chapter: Stars are classified by their physical characteristics, progress through a consistent series of stages in their life cycles, and are part of galaxies, which are likely to continue to expand forever. The concept map shown is one way to organize how the information in this chapter is related. You may use an extra sheet of paper.

**Stars, Galaxies, and the Universe**
